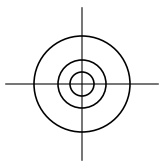
Lines at 1/8, 1/4 (solid) and 3/8 in from the edge.

FRONT



1. This black bar must measure exactly 5 inches. If it is shorter, turn off "fit to page" and print at actual size (100%).
2. Look at the lines near the edge. The solid line is 1/4 in from the edge. Every sheet keeps its pictures inside it.
3. Hold this sheet up to a light. The circle on this side must line up with the circle marked LONG on the back. If it lines up with SHORT, set the printer to "flip on long edge" and print again.
4. If the circles are close but not on top of each other, the gap you see is how far the back moves. Up to 1/16 in is fine.
